R.F. EMISSIONS COMPLIANCE STATEMENT
Pasadena Community College
KPCC Auxiliary Station
August 2008

The proposed Jampro, JSCP-2, full-wave, EPA type, #3 circularly polarized, antenna will be energized such that it will produce a maximum of 0.6 kW in the horizontal and vertical planes from a center of radiation above ground of 24.4 meters. The FCC has accepted measurements from Jampro for this antenna so we are able to apply the results of the EPA/FCC calculations to determine the R.F. emission levels toward the nadir at the site. Using the formulas expressed in the OET Bulletin, No. 65, August 1997, "Evaluating Compliance with F.C.C. Guidelines for Human Exposure to Radio Frequency Electromagnetic Fields", published by the Federal Communication Commission's Office of Science and Engineering, and then by applying a combination of the element and array pattern as defined in E.P.A. study PB85-245868 ("**Engineering Assessment of the Potential Impact of the Federal Radiation Protection Guidance on the AM, FM and TV Broadcast Services**") we calculate the contribution of the proposed auxiliary antenna at a point two meters above the ground (head height) to be 2.4 microwatts per square centimeter. For a controlled area the proposed antenna will therefore contribute only 0.24 percent of the maximum.

The proposed tower is at the Mount Wilson antenna farm and as such there are many other broadcast antennas in the vicinity, however since the antenna contributes less than one percent of the FCC maximum, no further analysis was deemed necessary. The area is restricted to the public and has a ten-foot fence around the entire periphery. It should be noted that the proposed antenna will only be in use when the KPCC primary antenna is off the air, so due to the slightly lower height of this antenna, there will be only a small increase in R.F. power density at the base of the tower when the antenna is energized..

The antenna will be mounted on an existing tower built before the March 16, 2001 date when all applicants were required to conform to the Historic Preservations Act and other similar requirements, therefore this tower is categorically excluded from environmental processing.

The applicant will cooperate with other broadcasters using the site to assure compliance with the Commission's emission exposure guidelines.

Consequently, it appears that the proposed FM auxiliary antenna will be in full compliance with the Commission's human exposure to radiofrequency electromagnetic field rules and regulations.
