Attachment 12
The RF power density of KPCC-FM3 at the highest accessible point of the rooftop, (10' bellow the antenna) is 219 uw/cm² or 20% of MPE for occupational areas at the edge of the tower structure.

The calculated density was confirmed physically using a handheld RF Density monitor where I measured a maximum of 225 uw/cm².

The buildings to the east and west of the broadcast location are 4 stories or approximately 40’ lower in height would have exposure at the most 9 uw/cm²
